                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       an alpha-1,6-glucosidic bond. The modification of the recombinant pullulanase appears to be a result of misprocessing of the signal sequence by a signal peptidase as well as susceptibility to extracellular proteolytic processing. The invention provides modified pullulanases, especially N-terminally truncated B. deramificans modified pullulanase, nucleic acids encoding them, vectors, host cells and methods for recombinant production. The modified pullulanases are useful in the starch industry for the saccharification of aqueous liquefied starch, forming syrups of high glucose and maltose content. Other uses (not claimed) are: as anti-staling additives in bread; in brewing low calorie beers; production of low calorie foods; where amylose is used as substitute for fat; to claiffy fruit juices; in the preparation of maltose;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Best Local Similarity Matches 269; Conserv
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    to condense mono- or oligosaccharides, or in the pharmaceutical industry (no details). When used for starch saccharification, the modified pullulanases reduce the amounts of by-products, especially they provide higher glucose yields in short reaction times, without losses associated with reversion reaction products. When used with glucoamylase, they make possible a higher level of dissolved solids in the material being treated, resulting in increased productivity and a more energy-efficient process.

Note: The present sequence is not shown in the specification but is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  is modified yet retains the ability to catalyse the hydrolysis of an alpha-1.6-glucosidic bond. pullulan. The invention relates to the discovery control of the recombinantly produced in a Bacillus host of is modified yet retains the ability to catalyse the hydrolysis of is modified yet retains the ability to catalyse the hydrolysis of the modification of the recombinant of the modification of the signal periodes as well as susceptibility to extracellular proteolytic processing. The invention provides of extracellular proteolytic processing. The invention provides of modified pullulanases, especially N-terminally truncated B. CC modified pullulanases, especially N-terminally truncated B. CC vectors, host cells and methods for recombinant production. The cc modified pullulanases are useful in the starch industry for the saccharification of aqueous liquefled starch, forming syrups of high glucose and maltose content. Other uses (not claimed) are: as

Other uses (not craimed) alto beers; anti-staling additives in broad; in brewing low calorie beers; anti-staling additives in broad; in brewing low calorie beers; production of low calorie foods (where amylose is used as substitute for fat); to clarify fruit juices; in the preparation of oligosaccharides from amylopectin or of tetraholosides from maltose; to condense mono- or oligosaccharides, or in the pharmaceutical industry (no details). When used for starch saccharification, the
                                                                                                                                                                                                                                                                                                                industry (no details). When used for starch saccharification, the modified pullulanases reduce the amounts of by-products, especially they provide higher glucose yields in short reaction times, without losses associated with reversion reaction products. When used with glucoamylase, they make possible a higher level of dissolved solids in the material being treated, resulting in increased productivity and a more energy-efficient process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents an N-terminally truncated pullulanase of Bacillus deramificans strain T89.117D, comprising amino acids 99-928 of the native mature enzyme (see Y31746). The native mature pullulanase (EC-3.2.1.41) has a pI of 4.1-4.5, a half-life of about 55 hr at 60 deg C and is capable of catalysing the hydrolysis of alpha-1.6-glucosidic bonds in amylopectin and pullulan. The invention relates to the discovery that B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Misc-difference
                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New modified pullulanase for saccharification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 1999-540851/45
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (GEMV ) GENENCOR INT INC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents the Bacillus pullulanase protein. The invention relates to a mutant pullulanase in which at least one methionine residue in the pullulanase is deleted or replaced by an optional amino acid residue other than Cys and Met and/or at least one alanine residue in the amino acid residues constituting pullulanase is deleted or replaced by an optional amino acid residue other than Ala. The mutant pullulanase is useful in bleach containing detergents. The pullulanase is highly resistant to oxidisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /note= "nucleotides encoding these residues are present in the coding sequence given in specification"
